EDUCATION

University of Minnesota Twin Cities, College of Science and Engineering

Minneapolis, MN

B.S. Computer Science & B.S. Data Science

Expected May 2027

GPA: 3.75, Dean's List · Languages: English, Polish

Relevant Coursework: Operating Systems, Machine Architecture & Organization, Practice of Database Systems, Software Engineering

SKILLS

Languages & Scripting: Python, Bash, SQL

Cloud & Infrastructure: Azure (SQL, Data Factory, Blob Storage), DigitalOcean, Docker, Linux/Ubuntu, VMware ESXi, Microsoft Entra ID (IAM), Meraki, SonicWall, VLAN/subnet, DNS (SPF/DKIM/DMARC), Nginx, rsync

Tools: Git/GitHub, Microsoft Intune (MDM), systemd, cron

EXPERIENCE

Data Engineer Intern

Sep 2025 – Present

PURIS

Minneapolis, MN

- Led an infrastructure modernization initiative across multiple production sites, bringing networking, server workloads, and identity management in-house and off a legacy MSP.
- Migrated production Docker workloads to new Ubuntu servers (SHA-256-verified 3.2 GB backups, staged zero-loss cutover) and evaluated VMware ESXi virtualization hosts.
- Discovered and mapped multi-site network topology; coordinated a SonicWall → Meraki MX85 firewall cutover and simplified VLAN/subnet design.
- Designed dynamic Microsoft Entra security groups from HRIS attributes for automated, role- and location-based access control.
- Hardened DNS and email security (SPF/DKIM/DMARC) during a registrar-to-Cloudflare consolidation.
- Assessed production power resilience after an outage, mapping critical servers, firewalls, switches, and network gear to battery-backed UPS coverage.

Software Engineer Intern

May 2024 – Dec 2024

Fine Global Assets

Chicago, IL

- Built and deployed full-stack web applications (React, Node.js) with Git/GitHub version control.

PROJECTS & AWARDS

Cloud-Hosted Trading Engine

DigitalOcean, Python, Linux

- Architected and deployed cloud infrastructure for a fully automated trading application on DigitalOcean, using asynchronous REST polling and Linux cron fail-safes for high availability under strict API rate limits (1st place, FMA competition, judged by DRW & Cargill).

AJAP — Self-Hosted Service

Python, Linux, systemd, SQLite

- Built a self-hosted pipeline running as an always-on Linux systemd service with scheduled jobs, persistent state, and automated alerting.

ADDITIONAL

Dean's List · Google Developer Student Club, Social Coding
