EDUCATION

University of Minnesota Twin Cities, College of Science and Engineering

Minneapolis, MN

B.S. Computer Science & B.S. Data Science

Expected May 2027

GPA: 3.75, Dean's List · Languages: English, Polish

Relevant Coursework: Practice of Database Systems, Data Structures & Algorithms, Regression & Statistical Computing, Software Engineering

SKILLS

Languages: SQL, Python, JavaScript/TypeScript, Ruby, Java, R, Bash

Data & Cloud: Azure Data Factory (ADF), Azure SQL, Azure Blob Storage, ETL/ELT, stored procedures, REST APIs, JSON, Docker, pandas, SQLite

Tools: Git/GitHub, Linux/Ubuntu, rsync, Nginx, Transparent Data Encryption (TDE)

WORK EXPERIENCE

Data Engineer Intern

Sep 2025 – Present

PURIS

Minneapolis, MN

- Designed Azure SQL tables and stored procedures for complex JSON parsing and idempotent upserts to support an evolving production schema.
- Built and maintained a production-grade ETL pipeline in Azure Data Factory (ADF) that triggers daily, pulling JSON payloads via REST API into Azure SQL.
- Engineered an OT/IT data pipeline extracting high-frequency time-series metrics from a VantagePoint historian database into an encrypted SQL backend.
- Orchestrated a zero-downtime migration of a critical Operational Technology (OT) testing application from a legacy MSP-hosted environment to a new internal SQL Server, securely transferring user logins and TDE encryption keys via a parallel-run cutover.
- Refactored a macro-enabled (VBA) Excel client — updating SQL connection strings, removing hardcoded IP dependencies, and resolving authentication bugs — to reliably capture and upload validated time-series data.
- Preserved 12.3 GB / 119,000+ files of historical corporate data by staging and uploading to Azure Blob Storage with a validated local audit vault.

Software Engineer Intern

May 2024 – Dec 2024

Fine Global Assets

Chicago, IL

- Designed and developed the corporate website using React and Node.js, improving user engagement by 25% and retention by 15%.
- Integrated the Shopify API to launch an e-commerce platform for a company affiliate, streamlining online retail operations.

PROJECTS

AJAP — Self-Hosted Data Pipeline

Python, Flask, APScheduler, SQLite, LLM API

- Built an ingest → classify → store → alert pipeline that pulls roles from multiple sources, normalizes and classifies them via an LLM API into SQLite, and syncs to Google Sheets with batched Discord alerts.
- Scheduled the pipeline as a continuous Linux daemon (APScheduler) with persistent state to avoid duplicate processing across restarts.

Algorithmic Trading Backtester

Python, pandas, yfinance

- Engineered a Python data pipeline that ingests, cleans, and structures market data via the yfinance API into pandas DataFrames for strategy evaluation.

AWARDS & ACTIVITIES

1st Place, Quantitative Trading Competition (Financial Mathematics Association) · Dean's List · Google Developer Student Club, Social Coding
